

## **ABSTRACT**

The invention relates to a container (100) which has a carrier (1) for the storage and presentation of surgical auxiliary material (80), in particular screws, such as bone screws, in the holding or mounting position, and at least one removable cover (48) for preventing the loss of the auxiliary material, the surgical auxiliary material (80) being presentable in isolated form. According to the invention, it is envisaged that at least two containers (100) be separably connected to one another via the cover (48) and/or the carrier (1).
